

# Exploring the GABAN GOLD PROJECT, PERU

## INVESTMENT HIGHLIGHTS

### GABAN GOLD PROJECT – PERU

- 18,700 Ha. project located around the town of Gaban
- Covers a 25km section of the Puno Orogenic Gold Belt
- Good infrastructure; the Interoceanic highway runs through the project area, and there is a hydroelectric dam located near the town of Gaban
- A 5km long series of gold in stream sediment anomalies along the Yanamayo river is a priority target area
- The Yanamayo River is one of the potential sources of gold contributing to the Madre de Dios alluvial gold fields (located 40km north of Gaban), an area of alluvial mining covering over 700km<sup>2</sup>
- Follow up of the stream sediment anomalies discovered multiple active artisanal mining camps, evidence of historic mining activity, and old prospect adits up to 15m long
- Current artisanal mining activity is recovering coarse gold from the Yanamayo river

### TINKA IOCG PROJECT - PERU

- Located in SE Peru in the coastal IOCG belt
- 300km SE of Lima
- 1,800 Ha property
- Adjacent projects have historic and recent copper production
- Mineralised structures trend onto the Tinka licence area

## COMPANY OVERVIEW

**Winshear Gold Corp (TSX-V: WINS)** was created in 2019 with the acquisition of the Gaban (shear zone hosted gold) and Tinka (Iron oxide copper gold / IOCG) projects, located in Peru, from Palamina Corp (TSX-V:PA).

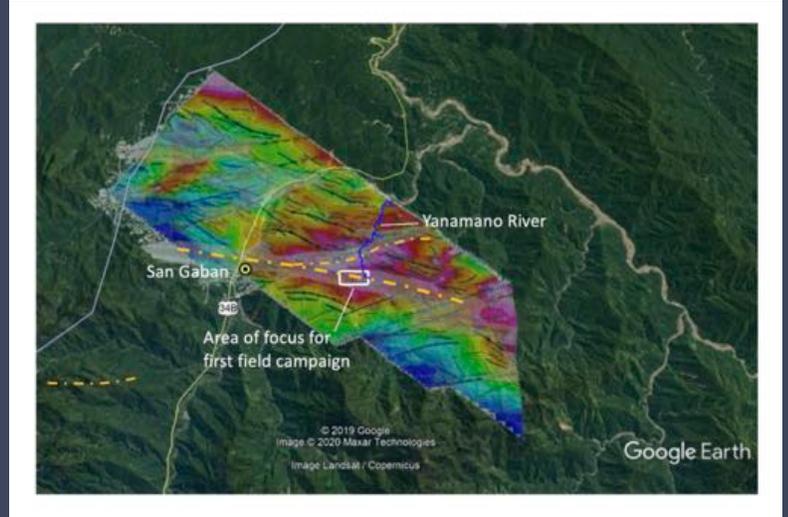

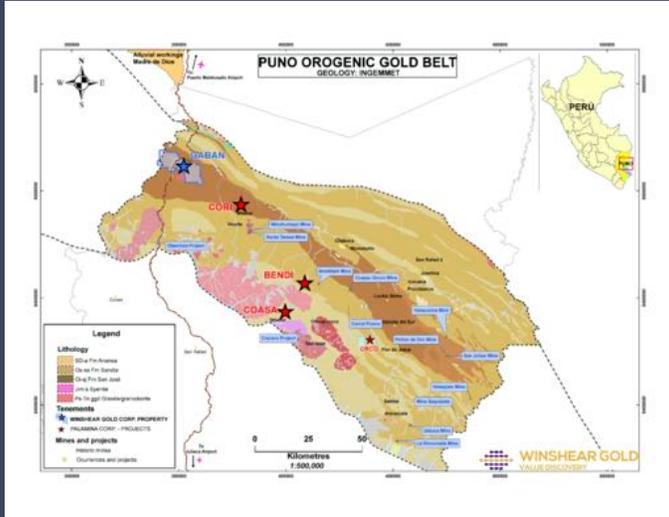

Palamina will act as the operator for Winshear in the first year. The Gaban Gold project is located in the Puno Orogenic Gold Belt (“POGB”) which is one of the worlds least formally explored orogenic gold belts.

Gaban has been partially ground-truthed by historic as well as current artisanal, small-scale and informal miners who are generally limited by operating conditions to mining gold from the top 50–100 metres below surface. Mineralized orogenic gold systems in the POGB extend vertically downwards to over 1,000 metres depth.
